Frictionless SaaS Insights: How dbt uses Omni

Snowflake World Tour · Berlin · Sept 2026

Agenda

Intro and context

- *What I know and need from data as a PS manager @ dbt Labs*

What Omni helped me do last month

- *Diving deeper into existing reports*
- *AI for open-ended discovery*

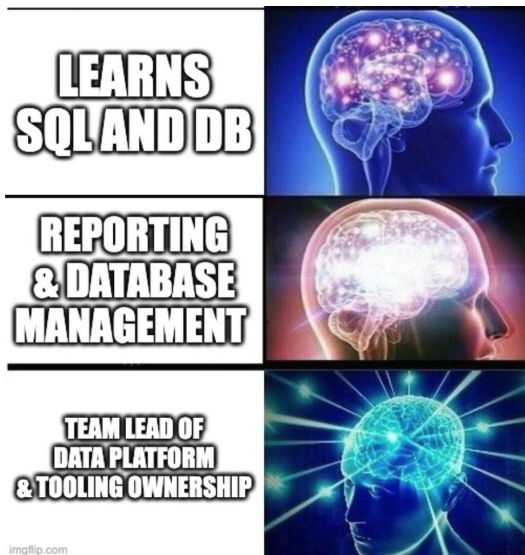

How dbt & Omni work together

- *Two-way metadata sync*
- *Change management*
- *Semantic layer*

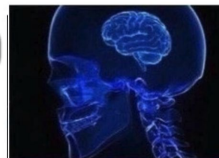

INTRO

What I know about data

(ATTEMPT OF)
DATA
CONSUMER

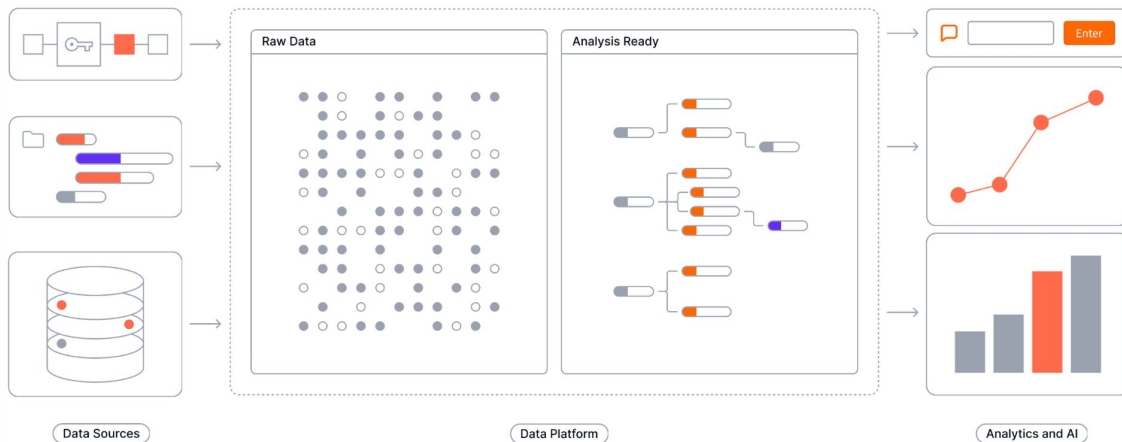

I know what the data could answer. I can no longer get it myself fast enough

INTRO

What is dbt?

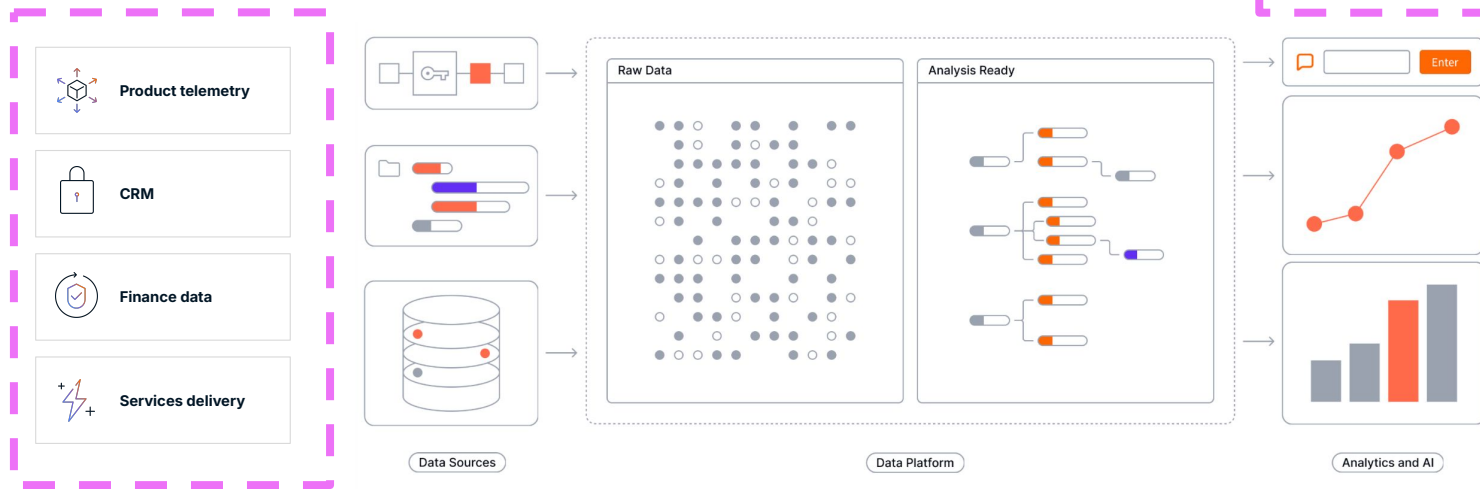

For most of this room, that middle step is running on Snowflake

INTRO

What is dbt?

For most of this room, that middle step is running on Snowflake

Before:

Obie's data layer was built on a Data Vault 2.0 methodology. Better suited for large enterprises, the setup slowed development and created overhead that didn't fit a lean, fast-moving insurance tech company:

- Large portions of the pipeline were regularly rebuilt, raising warehouse costs as data volumes grew
- Engineering capacity pulled into manual fixes, multiple pipelines, and inconsistent metric definitions

What the shift to dbt V2 (formerly Fusion) on dbt platform delivered:

30%

Reduction in compute usage through state-aware orchestration

2-5

Engineering hours a week reclaimed

90%

migration complete, for significantly faster development cycles

"Everything about dbt V2 (formerly Fusion) has sped up my workflows...eventually, I'll never have to leave my coding environment and be able to work with all the data in one pane of glass."

-Matt Karan
Senior Data Engineer, Obie Insurance

Context

How do I use data

As a Serviced Manager at dbt Labs, my role involves:

working closely
with our
customers

consuming our
internal data, not
producing it

context switching & a
large problem space

I need data to be easily accessible, interpretable & self service

What Omni helped me do last month

The use case

What I asked:

- ◇ How many accounts are we talking about?
- ◇ How long does it actually take an account to upgrade?
- ◇ What's the potential revenue we'd be unlocking with this initiative?

The answers sat across product telemetry, the CRM and our delivery data, none of which I own.

Greatest Colleague ever

Welcome back, can't wait to catch up! Remind me to walk you through a project about supporting our high-touch accounts through the upgrade to the latest version in our call.

B I U

How do I go back to mat leave?

Parse time for 10k model project

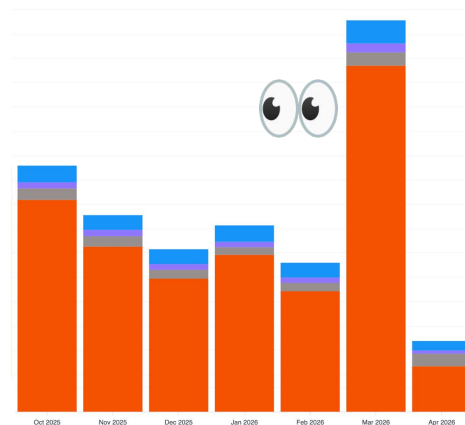

What Omni helped me do last month

Find the existing reports

WHICH CUSTOMERS NEED TO UPGRADE?

- I went in the lookout for existing reports
- The report as designed is already advice.
- No reinventing, and aligned with product and engineering from the start.

Diving deeper into existing reports

HOW DO WE PRIORITISE?

- I opened a report and the Explore menu was there
- I invented no definitions
- Omni let me use what the data team had already agreed with each owning team, in one view

AI for open-ended discovery

HOW DO WE MEASURE SUCCESS AND FOR HOW LONG?

- Filters to relevant **Topics**
- Surfaces high level **insights**
- **Explains** logic and process
- Prompts further lines of **investigation**

Can you tell me what proportion of individuals within our enterprise customers have completed the dbt Architect certification?

Tasks (2 of 2)

- ✓ Check
- ✓ Query total learners and architect-certified/started learners for enterprise customers, to compute proportion

Let me look at the topic which has the architect certification fields, and check what fields are available to filter by account segment.

> @ Search model

> @ Value lookup

Here's the summary for enterprise customers:

Metric

Total Learners (Enterprise)

Started or Completed Architect Cert

% Engaged with Architect Cert

Just under across enterprise customer accounts have engaged with the dbt Architect certification

A few notes on methodology:

- "Started or completed" is defined as having enrolled in any of these courses:
- The total learner base includes all individuals from enterprise accounts who have engaged with any dbt Learn experience.
- The Architect exam was only introduced in May 2025, so this is still an early-stage adoption metric.

Would you like to break this down further — for example, by account or region, or compare Architect vs Developer certification rates?

The outcome

ONLY SOME HOURS OF WORK ANSWERED:

- Which customers, and in what order
- Who we test with first
- How we know it is working
- How long one migration really takes?

No tickets. No context switching. No building.

What the shift to Fusion on dbt platform delivered:

88%+

faster platform
performance

5500

data tests
supported in a
single project

3500

models supported in
a single project

"With the dbt Fusion engine, the performance improvements showed up across the entire development experience. Teams spent less time waiting for processes to complete, moved changes through the pipeline faster, and could focus more of their time on building and delivering data products."

— Vishesh Jain
Delivery Lead, Data Analytics Platform, RMIT University

DELIVER

Before:

RMIT University runs a centralized analytics platform on dbt platform, Snowflake, and AWS, supporting 20+ teams and thousands of models and tests. As adoption grew, parsing, compilation, and validation each added waiting time that piled up across the pipeline.

- 6,100 deprecations blocked Fusion's full performance gains.
- Parsing took roughly three minutes per run.
- Feature pipelines took about eight minutes to deploy.

What the shift to Fusion on dbt platform delivered:

88%+

faster platform performance

5500

data tests supported in a single project

3500

models supported in a single project

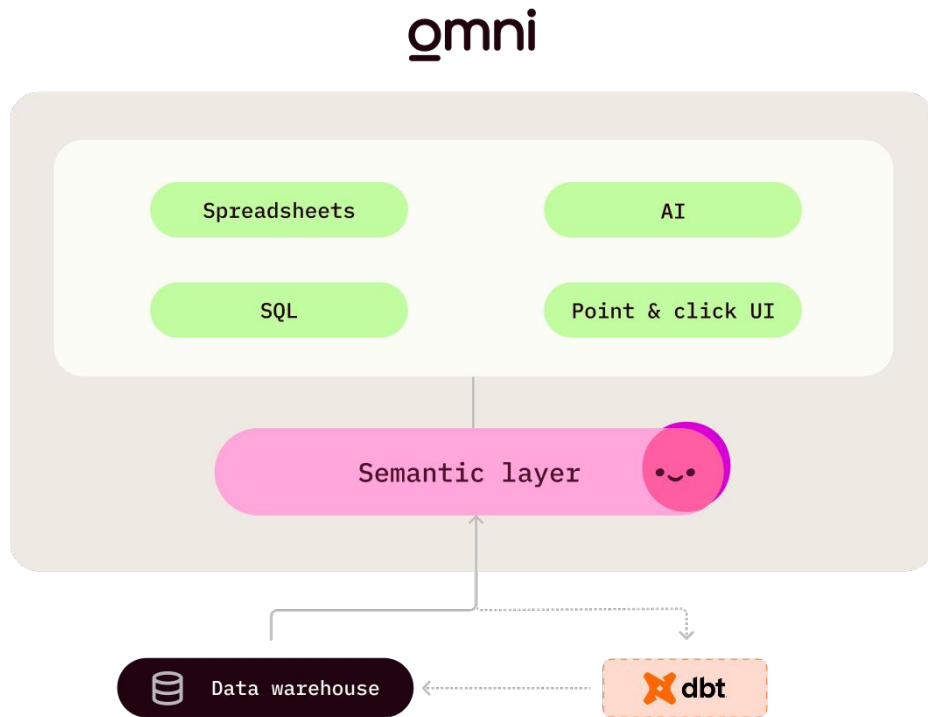

"With the dbt Fusion engine, the performance improvements showed up across the entire development experience. Teams spent less time waiting for processes to complete, moved changes through the pipeline faster, and could focus more of their time on building and delivering data products."

dbt + Omni

- ◇ **Two-way integration:** metadata syncing & git controls
- ◇ **Change management tools:** schema refreshes & content validator
- ◇ **Dynamic dbt environments:** switch between dev & prod
- ◇ **dbt semantic layer** integration

The Takeaways

What will you explore next?

I'll be around for questions, so will Blobby
